[linkedin.com/in/vinoth-kumar-t-68971224a](https://www.linkedin.com/in/vinoth-kumar-t-68971224a)

QA Automation Engineer / SDET with hands-on expertise in Playwright, Selenium, API testing, and CI/CD pipelines, consistently implementing robust test automation frameworks to enhance software quality and reliability. Experienced in automating end-to-end workflows for enterprise web applications with a strong focus on scalable Page Object Model frameworks that reduced manual regression effort by 50%. Skilled in GenAI / LLM-assisted testing through Playwright MCP with GitHub Copilot, and familiar with conversational platform QA, API contract validation, and Azure DevOps integration. Coordinated User Acceptance Testing (UAT), conducted comprehensive QA audits, prepared stakeholder reports, and facilitated Agile Scrum delivery to ensure project alignment and quality. Enthusiastic about applying automation expertise to GenAI chatbot platforms and digital channel quality engineering.

Work Experience

Software Test Engineer – Automation

Annular Technologies | Chennai, Tamil Nadu

Jun 2024 - Present

- Project 1: ACOS – Automated Employee Management System
 - Built and maintained a scalable UI automation framework using Playwright with POM architecture, covering 80% of critical business workflows.
 - Leveraged Playwright MCP via GitHub Copilot to generate and refine test scripts faster, simulating AI-assisted automation similar to GenAI chatbot test generation pipelines.
 - Automated 50+ end-to-end test scenarios, reducing script duplication and improving maintainability across test suites.
 - Authored 100+ API automation test cases using Rest Assured and Karate, validating GET, POST, PUT, and DELETE endpoints with schema validation and auth handling, improving API defect detection by 40%.
 - Designed comprehensive test data strategies covering positive, negative, boundary, and equivalence partition scenarios; used SQL queries to seed and validate backend data states.
 - Conducted exploratory and manual testing for newly developed features, identifying edge-case defects not covered by scripted tests.
 - Integrated automation suites into Azure DevOps CI/CD pipelines, reducing release validation time by 30%.
 - Coordinated UAT sessions with business stakeholders, preparing test data packs and user scenarios ensuring product readiness.
 - Performed continuous process monitoring across test environments, proactively escalating pipeline failures.
 - Participated in internal QA audits, reviewing test coverage gaps, script quality, and adherence to testing standards.
 - Logged and monitored 150+ defects in JIRA with detailed reproduction steps, screenshots, and environment details.
 - Reported daily test execution metrics and quality status dashboards to stakeholders and project leads.
- Project 2: Nithra ERP Web Application Automation
 - Expanded UI automation coverage across 10+ ERP modules using Playwright; performed regression, smoke, and sanity test cycles before each release.
 - Used Playwright MCP with GitHub Copilot to assist in writing and reviewing automation scripts, reducing manual scripting effort.
 - Performed API automation and validation using Karate and Postman, achieving 75% API endpoint coverage.
 - Created structured test data sets for ERP workflows including valid, invalid, and boundary-value inputs for robust data-driven coverage.
 - Applied manual testing techniques for complex ERP workflows; documented test cases with preconditions, steps, expected vs actual results.
 - Collaborated with developers to validate API contracts and backend integrations, reducing integration defects.
 - Led UAT coordination for key ERP modules, gathering end-user feedback and translating it into actionable defect reports.
 - Conducted QA process audits to identify coverage gaps and improve overall testing standards.

- Optimized existing test scripts and removed redundant cases, reducing overall test execution time by 25%.

Junior Software Test Engineer (Internship)

Inmakes Infotech | Kochi, Kerala

Jan 2023 - May 2023

- Assisted in manual and automation testing activities for web applications, contributing to 10% improvement in testing efficiency and gaining exposure to full SDLC and STLC processes.
- Wrote and performed functional, regression, and smoke test cases aligned to business requirements; maintained detailed test case documentation with preconditions, steps, and expected results.
- Created test data for assigned modules covering valid, invalid, and boundary-value inputs to validate business logic.
- Supported UAT sessions by preparing test data, documenting results, and assisting users in validating workflows.
- Reported and tracked software bugs in JIRA; collaborated with developers on defect reproduction and verification.
- Developed and executed automated test cases using Selenium WebDriver and playwright, improving test documentation practices and contributing to streamlined test case design.

System Engineer – Industrial Automation

Indokraft Machine Tool Pvt Ltd | Bangalore, Karnataka

Aug 2019 - Apr 2023

- Programmed and maintained PLC ladder logic using Siemens S7 series for automated machine tool control systems.
- Worked with Heidenhain CNC controllers for machine commissioning, diagnostics, and parameter configuration.
- Troubleshooted and resolved electrical and automation faults, minimizing machine downtime on the shop floor.
- Collaborated with mechanical and electrical teams during machine installation, testing, and handover.
- Prepared and maintained test case documentation for control system test procedures, including preconditions, test steps, expected results, and sign-off records for compliance.
- Documented control system diagrams and maintenance logs for audit and compliance purposes.

Education

K.S.R College of Engineering

Electronics and Communication Engineering (ECE) | Bachelor of Engineering

2015 - 2019

First Class

Skills

Hard Skills

Playwright (MCP + GitHub Copilot), Selenium WebDriver, Page Object Model (POM), GenAI / AI-Assisted Testing, Playwright MCP with GitHub Copilot – AI-powered test generation, LLM response validation (accuracy, latency, safety), AWS (basics), REST API validation, CI/CD pipeline management, Rest Assured, Karate Framework, Postman, API Chaining, Schema Validation, Bearer Token / OAuth, JavaScript, TypeScript, Core Java, Python (Basic), TestNG, Cucumber (BDD), JUnit, Azure DevOps Pipelines, Jenkins, Git, GitHub, Regression, Smoke, Sanity, Exploratory, Manual, API Automation, UI Automation, Integration, UAT, Performance (Basic), SQL-based validation, data-driven testing, positive/negative/boundary scenario design

Soft Skills

JIRA, QA Audits, Test Planning, Defect Management, Sprint Planning, Agile Scrum, Analytical skills, Problem-solving skills, Verbal communication, Written communication

KEY ACHIEVEMENTS

50% reduction in manual regression effort through reusable automation framework utilities

35% improvement in overall test execution efficiency via framework design optimisation

80% critical business workflow coverage achieved using Playwright and POM architecture

40% increase in API defect detection rate through schema validation and authentication handling

30% faster release validation cycles by integrating tests into Azure DevOps CI/CD pipelines

150+ defects logged and monitored in JIRA with detailed steps, evidence, and environment data

AI-assisted test script generation via Playwright MCP + GitHub Copilot, directly applicable to GenAI chatbot testing workflows
